Cash Flow Projection Tool for Indian SMEs — Complete Practical Guide ## PART 1: How Fathom Actually Works (Reverse-Engineered) ### The Core Logic Fathom primarily uses the **Indirect Method** because it requires LESS granular data: ``` INDIRECT METHOD (What Fathom does):

────────────

end): 7. Cash & Bank Balance ← actual cash position 8. Sundry Debtors (Receivables) ← money owed TO you 9. Stock-in-Hand (Inventory) ← cash stuck in stock 10. Sundry Creditors (Payables) ← money YOU owe 11. Loans (Outstanding) ← debt position 12. Fixed Assets (Gross Block) ← capex tracking

---

━━━━━━━━━━ OPTIONAL but HIGH IMPACT:

━━━━━━━━━━ 13. Expense breakdown (Salary, Rent, Utilities separately) 14. GST Payable / Input Credit ← real cash impact in India 15. Advance from Customers ← common in Indian SMEs 16. Advance to Suppliers ← common in Indian SMEs 17. TDS Receivable ← locked cash in India 18. EMI schedule for existing loans 19. Owner's Drawing / Capital introduced ``` --- ## PART 3: Indian SME Reality — Tally/Excel Data ### What Tally Prime Actually Exports ``` TALLY PRIME EXPORT OPTIONS:
━━━━━━━━━━

10% TDS before paying you - You receive LESS cash than your invoice - TDS refund comes after ITR filing (6-18 months) → NEED: TDS receivable amounts 3. Cash Transactions: - Many SMEs still do 10-30% business in cash - May not be fully recorded in Tally → REALITY: Your forecast will be off by this % 4. Cheque/PDC (Post-Dated Cheques): - Common in Indian trade - Sale recorded today, cheque dated 45 days later → NEED: Cheque clearing dates 5. Owner Mixing Personal + Business: - Very common in Indian SMEs - "Capital Account" has random drawings → NEED: Separate owner transactions 6. Advance-Based Business: - Many Indian SMEs take advances before delivery - Shows as liability, not revenue → NEED: Track advance → revenue conversion ``` --- ## PART 4: Is This Buildable by a 22-Year-Old? (Brutally Honest) ``` SHORT ANSWER: YES, but scope it ruthlessly.

```
WHAT'S HARD:
✗ Parsing messy Tally exports (2-3 weeks of pain)
✗ Building a reliable classification engine for ledger names
✗ Handling edge cases in Indian accounting data
✗ Making projections that are actually useful (not just math)
WHAT'S NOT HARD:
✓ The actual cash flow math (it's basic arithmetic)
✓ Building a web UI for upload + display
✓ Generating a 3-6 month forecast
✓ Making charts that look professional
REALISTIC TIMELINE (solo founder, full-time):
Week 1-2: Build Tally/Excel parser (hardest part)
Week 3: Build classification engine (map ledgers → categories)
Week 4: Build indirect cash flow calculation
Week 5: Build basic projection engine
Week 6: Build UI (upload → results)
Week 7-8: Testing with real SME data, fixing edge cases
= 8 weeks to a working MVP
```
MVP Scope (Ruthlessly Cut) ```

```
━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━
MVP = 4 screens, 1 upload, 1 output
━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━
SCREEN 1: Upload
→ User uploads Tally Trial Balance OR fills Excel template
→ Minimum 3 months data, ideal 12 months
SCREEN 2: Verify & Classify
→ Show parsed data: "We found these accounts"
→ Let user confirm: "Is 'ABC Traders' a Customer? Supplier?"
→ Auto-classify where possible (Sundry Debtors = Receivables)
SCREEN 3: Assumptions
→ "Expected revenue growth next 6 months?" (slider: -20% to +50%)
→ "Any big expenses planned?" (simple input)
→ "Any loans expected?" (simple input)
SCREEN 4: Cash Flow Dashboard
→ Historical cash flow (indirect method) — table + chart
→ Projected cash flow next 6 months — table + chart
→ Cash runway: "You'll run out of cash in X months" or "Your lowest cash point is ₹X in Month Y"
→ Download as PDF/Excel
━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━
EXPLICITLY NOT IN MVP:
━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━
✗ Direct Tally API integration (use file upload)
✗ Direct method cash flow (use
```

indirect only) ╳ Multi-scenario modeling ╳ Automatic bank statement parsing ╳ Invoice-level tracking ╳ GST reconciliation ╳ Budgets & variance analysis ╳ Team collaboration ```
--- ## PART 5: THE ANSWER TO YOUR ACTUAL QUESTION ### What Minimum File Does the User Need to Upload? ```

═══════════════════════════════ OPTION A: TALLY TRIAL BALANCE EXPORT (Best Single File)

═══════════════════════════════ HOW USER GETS IT FROM TALLY PRIME: Gateway of Tally → Reports → Trial Balance → Set period (Apr 2024 to Mar 2025) → Export → Excel (Spread Sheet) → Save as .xlsx MINIMUM REQUIREMENT: - Trial Balance for CURRENT PERIOD (e.g., Apr-Dec 2024) - Trial Balance for PREVIOUS PERIOD (e.g., Apr-Mar 2024) OR - Monthly Trial Balances for last 6-12 months (IDEAL) WHAT THIS FILE CONTAINS: ```
Sample Tally Trial Balance Export (what you'll actually receive): ```

┌──┐ │ Trial Balance │ │ 1-Apr-2024 to 31-Dec-2024 │ │ ABC Enterprises │ ├──────────────────────────────────────┬──────────────────┬──────────────────┤ │ Particulars │ Debit │ Credit │ ├──────────────────────────────────────┼──────────────────┼──────────────────┤ │ Capital Account │ 15,00,000.00 │ │ Current Liabilities │ │ │ ← group │ Sundry Creditors │ │ │ ← sub-group │ Mehta Suppliers │ 2,50,000.00 │ │ Patel Raw Materials │ 1,80,000.00 │ │ Singh Packaging │ 70,000.00 │ │ Duties & Taxes │ │ │ GST Payable │ 1,20,000.00 │ │ TDS Payable │ 15,000.00 │ │ Provisions │ │ │ Provision for Expenses │ 50,000.00 │ │ Loans (Liability) │ │ │ HDFC Bank Term Loan │ 8,00,000.00 │ │ OD Account - SBI │ 2,00,000.00 │ │ Current Assets │ │ │ Sundry Debtors │ │ │ Sharma Traders │ 3,50,000.00 │ │ Delhi Distributors │ 2,80,000.00 │ │ Online Sales Pending │ 1,20,000.00 │ │ Cash-in-Hand │ 85,000.00 │ │ Bank Accounts │ │ │ SBI Current A/c │ 3,50,000.00 │ │ HDFC Current A/c │ 1,20,000.00 │ │ Deposits (Asset) │ │ │ Rent Deposit │ 1,00,000.00 │ │ Stock-in-Hand │ 5,50,000.00 │ │ TDS Receivable │ 45,000.00 │ │ Fixed Assets │ │ │ Plant & Machinery │ 12,00,000.00 │ │ Furniture & Fixtures │ 1,50,000.00 │ │ Computer & Laptop │ 80,000.00 │ │ Income │ │ │ ← P&L │ Sales Account │ 45,00,000.00 │ │ Domestic Sales │ 38,00,000.00 │ │ Export Sales │ 7,00,000.00 │ │ Purchase Account │ 25,00,000.00 │ │ Direct Expenses │ │ │ Freight Inward │ 1,20,000.00 │ │ Manufacturing Expenses │ 2,50,000.00 │ │ Indirect Expenses │ │ │ Salary & Wages │ 4,80,000.00 │ │ Rent │ 1,80,000.00 │ │ Electricity │ 60,000.00 │ │ Telephone & Internet │ 24,000.00 │ │ Depreciation │ 1,20,000.00 │ │ Interest on Loan │ 72,000.00 │ │ Bank Charges │ 12,000.00 │ │ Office Expenses │ 36,000.00 │ │ Professional

Fees │ 45,000.00 │ │ │ Travelling Expenses │ 30,000.00 │ │ │ GST Expense │ │ │ │ Misc Expenses │ 18,000.00 │ │
├──────────────────────────────────────┼──────────────────┼──────────────────┤ │ TOTAL │ 76,85,000.00 │ 76,85,000.00 │
└──────────────────────────────────────┴──────────────────┴──────────────────┘ ``` ### How You Parse This Into Cash Flow Categories ```python # YOUR CLASSIFICATION MAPPING: CATEGORY_MAP = { # ── BALANCE SHEET ── "cash_and_bank": ["Cash-in-Hand", "Cash", "Petty Cash", "Bank Account", "SBI", "HDFC", "ICICI", "Current A/c", "Savings A/c"], "receivables": ["Sundry Debtors", # Tally group name — catch ALL children], "inventory": ["Stock-in-Hand", "Closing Stock", "Raw Materials", "Finished Goods", "WIP"], "payables": ["Sundry Creditors", # Tally group name — catch ALL children], "loans": ["Loans (Liability)", "Term Loan", "OD Account", "CC Account", "Bank Loan", "Vehicle Loan"], "fixed_assets": ["Fixed Assets", "Plant & Machinery", "Furniture", "Computer", "Vehicle", "Building", "Land"], # ── P&L ── "revenue": ["Sales Account", "Sales", "Income", "Revenue", "Service Income", "Consulting Income"], "cogs": ["Purchase Account", "Purchases", "Direct Expenses", "Manufacturing Expenses", "Freight Inward", "Raw Material Consumed"], "operating_expenses": ["Indirect Expenses", "Salary", "Rent", "Electricity", "Office Expenses", "Admin Expenses"], "depreciation": ["Depreciation" # CRITICAL: Must separate this], "interest": ["Interest on Loan", "Interest Paid", "Bank Interest", "Finance Charges"], "tax": ["Income Tax", "Tax Paid", "Advance Tax"] } ``` ### OPTION B: If User Can't Export Trial Balance Monthly ```

── OPTION B: YOUR EXCEL TEMPLATE (User fills manually) ──

── Give user a Google Sheet / Excel template. They fill monthly numbers. Even approximate is fine. This is EASIER TO PARSE and many SMEs prefer it. ```
Your Template Should Look Like This: ```
┌──────────────────────────────┬──────────────┬──────────────┬──────────────┬──────────────┬──────────────┬──────────────┐ │ MONTHLY DATA │ Apr-24 │ May-24 │ Jun-24 │ Jul-24 │ Aug-24 │ Sep-24 │

WHAT TO SHOW ON YOUR UPLOAD PAGE:

"Upload your financial data in ANY of these formats:" 📁 Option 1: Tally Trial Balance (Recommended) → Export from Tally Prime: Gateway → Reports → Trial Balance → Excel → We need at least 3 months (6-12 months = better forecast) → Monthly trial balances OR two period-end trial balances 📁 Option 2: Tally P&L + Balance Sheet → Export both reports for same period → Ideally monthly exports 📁 Option 3: Our Excel Template (Simplest) → Download template, fill 14 rows × your months → Takes 15 minutes if you have Tally open 📁 Option 4: Tally Day Book (Most detailed) → All transactions, we'll categorize automatically → Best for detailed analysis

MINIMUM REQUIREMENT: ☑ At least 3 months of data (6+ months = much better) ☑ Must include: Sales, Expenses, Debtors, Creditors, Cash/Bank Balance, Stock, Loans ☑ File format: .xlsx, .xls, or .csv ☑ Don't worry about formatting — we handle messy Tally exports

---

———————————————————————————— ``` ### Your Build Priority Order ``` WEEK 1-2: Tally Excel parser (handle merged cells, Cr/Dr, Indian numbers) WEEK 3: Excel template upload (fallback, guaranteed clean data) WEEK 4: Indirect method cash flow calculation engine WEEK 5: Basic projection with simple growth assumption WEEK 6: Frontend: Upload → Verify → Assumptions → Dashboard WEEK 7: PDF export of projected cash flow WEEK 8: Test with 5 real SME datasets, fix everything that breaks LAUNCH with: "Upload Tally data or fill our template → Get 6-month cash flow forecast in 2 minutes" ``` This is buildable. The hardest part isn't the math — it's parsing Tally's horrible Excel exports. Nail that parser, and you have a product.
